

Update for 20/20 versions 6.42, 6.43, and 8.43 February ----, 2008

The following anomalies have been discovered in version 6.42, and have been addressed in both 6.43 and 8.43. Note that these items may or may not affect your work, so please take a moment to review.

- 1. Social Work rates for providers #2 and #3 did not calculate properly. Obviously, only an issue if you utilized more than one social work provider. Versions 6.43 and 8.43 are corrected.**
- 2. The first two rows in Schedule B did not calculate correctly if Schedule A was not completed. This is corrected in 6.43 and 8.43. In no situation should HPC-ONLY be entered in those 2 rows in any schedule.**
- 3. One suggestion received requested the “additional 1:1 time” option be expanded to larger ratios, such as 1:2, 1:3, etc. Historically this has been addressed by creating an additional schedule for those situations, and for the time being please continue with that practice.**
- 4. For sites serving more than eight individuals, more than one 20/20 may be completed to address the challenge. Technical assistance is available through your regional consultant to address these settings.**
